CAREER OBJECTIVE

Artificial Intelligence and Machine Learning undergraduate with hands-on experience in ML, Deep Learning and Generative AI. Skilled in building AI-powered automation solutions, developing ML models, and integrating LLMs into real-world applications

EDUCATION

B.Tech, Artificial Intelligence & Machine Learning	RNS INSTITUTE OF TECHNOLOGY	CGPA: 8.65	2022-2026
Senior Secondary (XII), Karnataka State Board	Infomatics National PU College	Percentage: 94%	2021
Secondary (X), Karnataka State Board	Amara Jyothi Higher Primary School	Percentage: 95%	2019

INTERNSHIP EXPERIENCE

AI Intern | LearnersByte

(January 2026 - May 2026)

- Developed an AI Email Agent using n8n, Mistral AI, Gmail, for automated email generation and delivery.
- Built an AI CV Screening System using Google Gemini, n8n, Google Sheets to automate resume analysis and candidate evaluation.
- Integrated LLMs into workflow automation systems for intelligent decision-making and content generation.
- Worked with prompt engineering, email automation, and AI-powered workflow orchestration.

TECHNICAL SKILLS

Programming Languages: Python, C++, C, HTML, CSS, JavaScript

Frameworks: React.js, Node.js, Flask, Bootstrap

Libraries: Scikit-learn, Pandas, NumPy, TensorFlow (Keras)

Data Analytics & Visualization Tools: MySQL, Power BI, Tableau

Generative AI & Automation: Gemini, Mistral AI, LLM Integration, Prompt Engineering, Workflow Automation, n8n

Development Tools & Environments: VS Code, Jupyter Notebook, Google Colab, Figma

PROJECTS

AI BASED RESUME SCREENING SYSTEM (Tech Stack: n8n, Google Gemini, Google Sheets, Gmail)

- Developed an AI-powered recruitment automation workflow using n8n and Google Gemini.
- Automated resume parsing, candidate evaluation, and AI-based candidate rating.
- Extracted text from PDF resumes and generated compatibility scores using Gemini AI.
- Integrated Google Sheets for candidate data management and Gmail for automated notifications.
- Reduced manual screening effort through intelligent workflow automation.

AI BASED EMAIL AGENT USING N8N (Tech Stack: n8n, Mistral AI, Gmail, Simple Memory)

- Built an AI-powered email automation agent using n8n and Mistral AI.
- Enabled natural language email generation and automated email delivery through Gmail integration.
- Implemented conversational memory for context-aware email drafting.
- Automated email creation workflows, improving communication efficiency.
- Integrated AI-generated content with Gmail for seamless end-to-end automation.

HEART DISEASE DETECTION USING MACHINE LEARNING (Tech Stack: Python, Pandas, Scikit-learn, XGBoost)

- Developed a machine learning model to predict cardiovascular disease risk using patient health data.
- Performed data preprocessing, feature engineering, and exploratory data analysis.
- Trained and evaluated Random Forest and XGBoost models for disease prediction.
- Achieved high classification performance through hyperparameter tuning and model optimization.
- Built a prediction pipeline for real-time risk assessment.

DEEP LEARNING BASED IMAGE CLASSIFICATION (CIFAR-10) (Tech Stack: Python, TensorFlow, Keras, NumPy)

- Developed image classification models using the CIFAR-10 dataset.
- Implemented and compared Artificial Neural Networks (ANN) and Convolutional Neural Networks (CNN).
- Performed image preprocessing, normalization, and model evaluation.
- Evaluated model performance using standard deep learning metrics.

Certifications: AI & Agentic AI Internship (LearnersByte), Python (Simplilearn), Full Stack Development (Udemy), Power BI
